[Eight RC3 safety doors supplied to Leibnitzerfeld Wasserversorgung in Austria](#)

One of the attack-proof HUBER RC3 safety doors in Austria

Leibnitzerfeld Wasserversorgung GmbH has set itself the target to ensure the supraregional water supply in South and Southeast Styria. With an annual water production of about 3 million m³ and daily peaks of up to 15,000 m³ they supply the drinking water for 39 municipalities and three joint communities with a total of 100,000 PE.

In total, they operate 11 well system, 42 elevated reservoirs (of which 20 of their own with a capacity of 10,000 m³), 60 pressure increasing plants, and a network of 170 km transport lines and 139 km supply lines. Furthermore, they network with the water boards Graz, Leibnitzerfeld South and Grenzland Southeast.

They plan to refurbish some of the elevated reservoirs, wells and pressure increasing plants in the near future. HUBER SE has been able to convince the responsible persons of Leibnitzerfeld Wasserversorgung GmbH of the high quality and functionality of their safety doors and received an order for the supply and installation of eight RC3 doors.

Already in the early project phase the HUBER sales representative in charge had taken care of the field measurement of the individual structures under the presence of a water master of Leibnitzerfeld Wasserversorgung GmbH. This ensures that the right measures can be taken for the problem-free installation of the HUBER RC3 doors. In addition, we give the customer a questionnaire where he can indicate his special requests and the special features of each door.

We would like to use this opportunity to thank the persons in charge at Leibnitzerfeld Wasserversorgung GmbH for their confidence in our products.
